vestre

*In Scandinavia, the right to roam is so strong that the principle that outdoor space belongs to all of us is part of our national spirit. At Vestre, we believe that this idea should be expanded to include urban areas across the world.*

# At Vestre, we want to make the world a better place by creating social meeting places – neighbourhood by neighbourhood

We make colourful, sustainable and inclusive furniture which encourages people to get together, to care and to participate in everyday democracy. If you travel around Norway, you can find furniture we created back in the 50s. It is still standing, creating social meeting places every day of the year. This year, we have been especially concerned about people finding their way back. We hope we can both find our way back to each other and create a strong 'we', and that we can find our way back to nature and the fight for sustainability. This will also be the year that Vestre will open the doors—and the green roof—to the world's most environmentally friendly and transparent furniture factory: The Plus. It was designed by BIG Bjarke Ingels Group as a completely new kind of factory where people, production, technology, architecture and nature are completely integrated with each other. In the heart of the building, which is shaped like a plus sign, there is an atrium with a single tree. It is there as a symbol of the global community—as an axis mundi. We know that the global environmental crisis is being made worse by the fact that many people have lost contact with nature. Vestre's aim is to be recognised as the world's most sustainable furniture manufacturer. It's a bold aim which guides our culture and the way we do business. Every year, we at Vestre give 10% of our profit to initiatives across the world that support the UN's Sustainable Development Goals. With this inspiration book, we hope to tell you more about our vision and about how we are working to achieve it.

On behalf of everyone at Team Vestre:  
Thank you for putting your trust in us!

Everyone can do  
their bit to save the  
world. Little by little.

At Vestre, we have incorporated nine of the UN's Sustainable Development Goals into our business philosophy, and our aim is to be recognised as the world's most sustainable furniture manufacturer. Although we will implement many measures ourselves, this is not enough. If the world is to succeed in eradicating poverty, fighting inequality and stopping climate change before 2030, a lot more will be needed. That's why, every year, Vestre gives at least 10% of our profits to sustainable projects around the world. If more companies followed suit, the business community could not only match the Norwegian aid budget, but more than double it. That says something about what we could achieve on a global scale. We encourage more people to share the cost and give their piece of the pie. That's why we've started the campaign Piece of the Pie Chart in order to inspire companies all over the world to give part of their profits to support the sustainability goals. *Join the fundraiser at [vestre.com/piece-of-the-pie-chart](https://vestre.com/piece-of-the-pie-chart).*

QUALITY  
EDUCATION

## Knowledge is power

Vestre supports Gyaw Gyaw's work to build schools in Myanmar, and UNICEF's work to give up to 3,500 children every year in conflict zones the opportunity to go to school. Together with the Oslo School of Architecture and Design and Norwegian Church Aid, we are developing a furniture design course in Jericho in the West Bank. In Scandinavia, we give out scholarships to recently graduated designers and collaborate with local vocational schools.

7

AFFORDABLE AND  
CLEAN ENERGY

## The future is electric

Vestre uses 100% renewable energy in its manufacturing processes. Most of this energy comes from clean hydropower. By 2025, we aim to be energy self-sufficient with renewable solar, wind and hydro power. On sunny days, our steel factory in Torsby already produces enough energy to power itself at 150,000 kWh a year. Our factory in Magnor, The Plus, will generate around 250,000 kWh of renewable energy per year, from more than 1,000 roof-top and ground-level solar panels. Surplus heat from production will heat the building. We also support SUNami's work to make everyday life easier for people in Kenya using solutions based on clean solar energy.

8

DECENT WORK AND  
ECONOMIC GROWTH

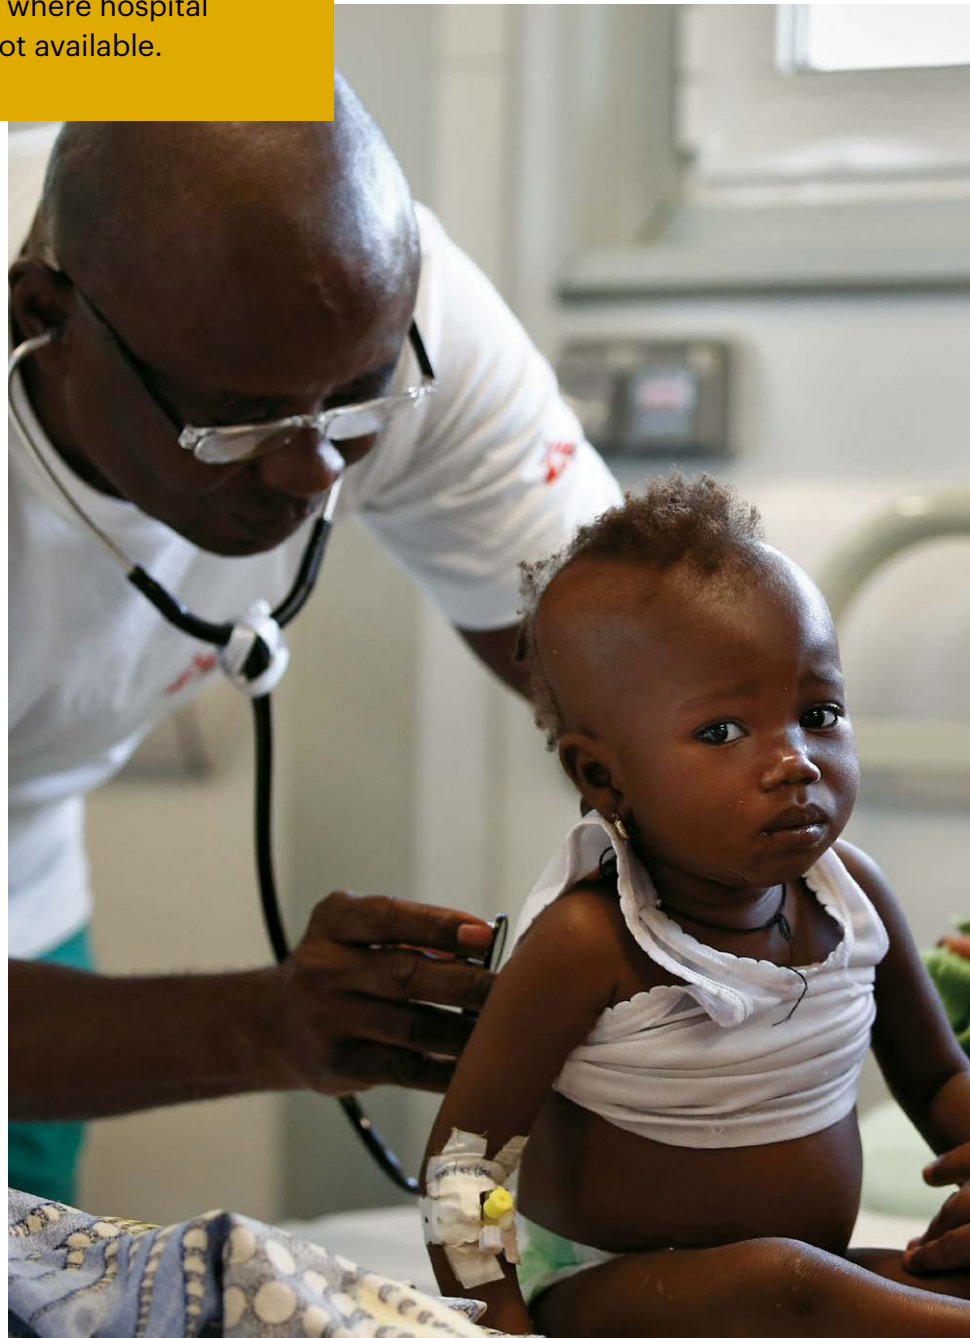

## Jobs for all

Vestre was the first furniture manufacturer to join Ethical Trade Norway nearly 15 years ago and we set strict requirements for all our subcontractors concerning human rights, labour rights and sustainable development. Because work is not just about income. It's about belonging, community and mastery. Vestre gives jobs to people with gaps in their CVs and poor access to normal working life. At our new factory The Plus, we have joined forces with regional vocational training institutions to create attractive apprenticeships and vocational training places for young people who have dropped out of ordinary upper secondary education. We also support the Church City Mission, which helps people struggling in their everyday lives.

Vestre supports Gyaw Gyaw's work in Myanmar to construct school buildings for existing schools and other educational institutions. With sustainable architecture as a guiding principle, they build schools using local and environmentally friendly materials that are adapted to the climate and landscape.

Collaborating with global organisations is sometimes the only way to reach people on the fringes of society. Vestre therefore supports the work done by Doctors Without Borders to reduce health disparities across the world, and to build field hospitals where hospital treatment is not available.

## Spearheading the green transition

Vestre consistently uses materials with the lowest possible emissions, even if it costs more. Examples of this are steel from SSAB, which has 30% lower emissions than the global average, and recycled aluminium from Norsk Hydro with up to eight times lower emissions. We are also in the process of electrifying all our internal goods transport. What's more, we recently began production at the world's most environmentally friendly furniture factory – The Plus – which sets a new standard for digitalisation and uses pioneering Industry 4.0 technology. Vestre has also continued to increase its engagement with Techbridge, an incubator for start-up companies in East Africa which has a particular focus on social and environmental impact.

## Less inequality creates more trust

We support work being carried out to reduce inequalities within and between countries. In all markets in which we have an active presence, we create secure jobs and contribute tax revenues. We refuse to supply hostile design, for example benches with spikes created to keep the most vulnerable people in society away from our shared outdoor spaces. We also support the work done by Doctors Without Borders to reduce health disparities across the world, and to build field hospitals where people do not have access to hospital treatment.

## Green cities are smart cities

Cities account for around 75% of all greenhouse gas emissions. Together with Young Sustainable Impact (YSI) and others, we are researching how major cities can become more energy-efficient through new mobility solutions, reusing surface water and providing more attractive outdoor areas. We offer litter bins that give alerts when they need to be emptied, and we are creating more and more products with charging options and wireless internet connectivity. Together with Chime, we are also working to extend microloans on crops. These can be paid back and used again to ensure economic growth and the creation of workplaces in low-income societies.

## Vestre Vision Zero

Our vision is to not make a single product that cannot last forever. This is possible with correct use and maintenance, along with a scheme where, after years of use, worn out furniture can be restored and reused. We don't cut corners. We provide a lifetime guarantee against rust and at least a 15-year guarantee on paint and wood. We supply spare parts with no time limit; our products have no expiration date. We also support Empower who work to reduce marine plastic pollution and increase employment in countries that need it. For example, people in Laos can earn microcredit by clearing ocean plastic so they can start their own companies, just like Johs. Vestre did in 1947.

## Zero emissions target

Man-made climate change is the biggest challenge of our age. There are solutions however, although we are running out of time. Our steel factory in Torsby has already been carbon-neutral for more than 10 years. While reducing our own emissions, we are a driving force behind speeding up the development of fossil-free steel and long-distance transport based on pure hydrogen, for example. We also help fund UN-approved environmental projects in other parts of the world, for example landfill facilities in Colombia and rainforest protection in Papua New Guinea.

## Nature has an intrinsic value

Vestre uses environmentally-certified wood from what is probably the world's most sustainable forestry sector. For every tree that is felled, at least one new tree is planted. We never offer rainforest timber, as loss of rainforest is a global problem. In 2017, we launched the world's first Nordic Swan Eco-labelled bench. Today, we have over 300 environmentally certified products and we have no intention of stopping there. We have a brand-new product series called Vestre Habitats, the goal of which is to increase knowledge and awareness of loss of biodiversity through functional and thoughtfully designed furniture that encourages natural processes. We also work with Farm for the Future on developing more sustainable farming in Tanzania.

Vestre's vision is to not make a single product that cannot last forever. Hvilan benches have stood in Vækerø in Oslo for over 30 years for the benefit of people of all ages.

# News

Ten years ago, we opened our our Snøhetta designed steel factory in Torsby, Sweden. Award-winning photographer Einar Aslaksen stood ready to photograph the new products. Now he's back to do the same again. This time at The Plus, our new furniture factory in Magnor, designed by BIG Bjarke Ingels Group. We are now presenting our new products for 2022 at the world's most environmentally friendly furniture factory. The beautiful production facility, surrounded by a mighty Norwegian pine forest, contains furniture from Scandinavia's leading designers.

Name: Kinn lounge chair  
Designed by: Anderssen & Voll  
RAL: 1024, linseed oil-treated pine

The Kinn lounge chair is made of Hydro CIRCAL which consists of at least 75% recycled aluminium. This is the highest content of recycled material on the market, which means drastically reduced energy consumption, while the product is also of high quality and durable. Kinn is comfortable, stackable, and easy to move around as needed. It is part of a larger furniture family that will be launched in 2022.

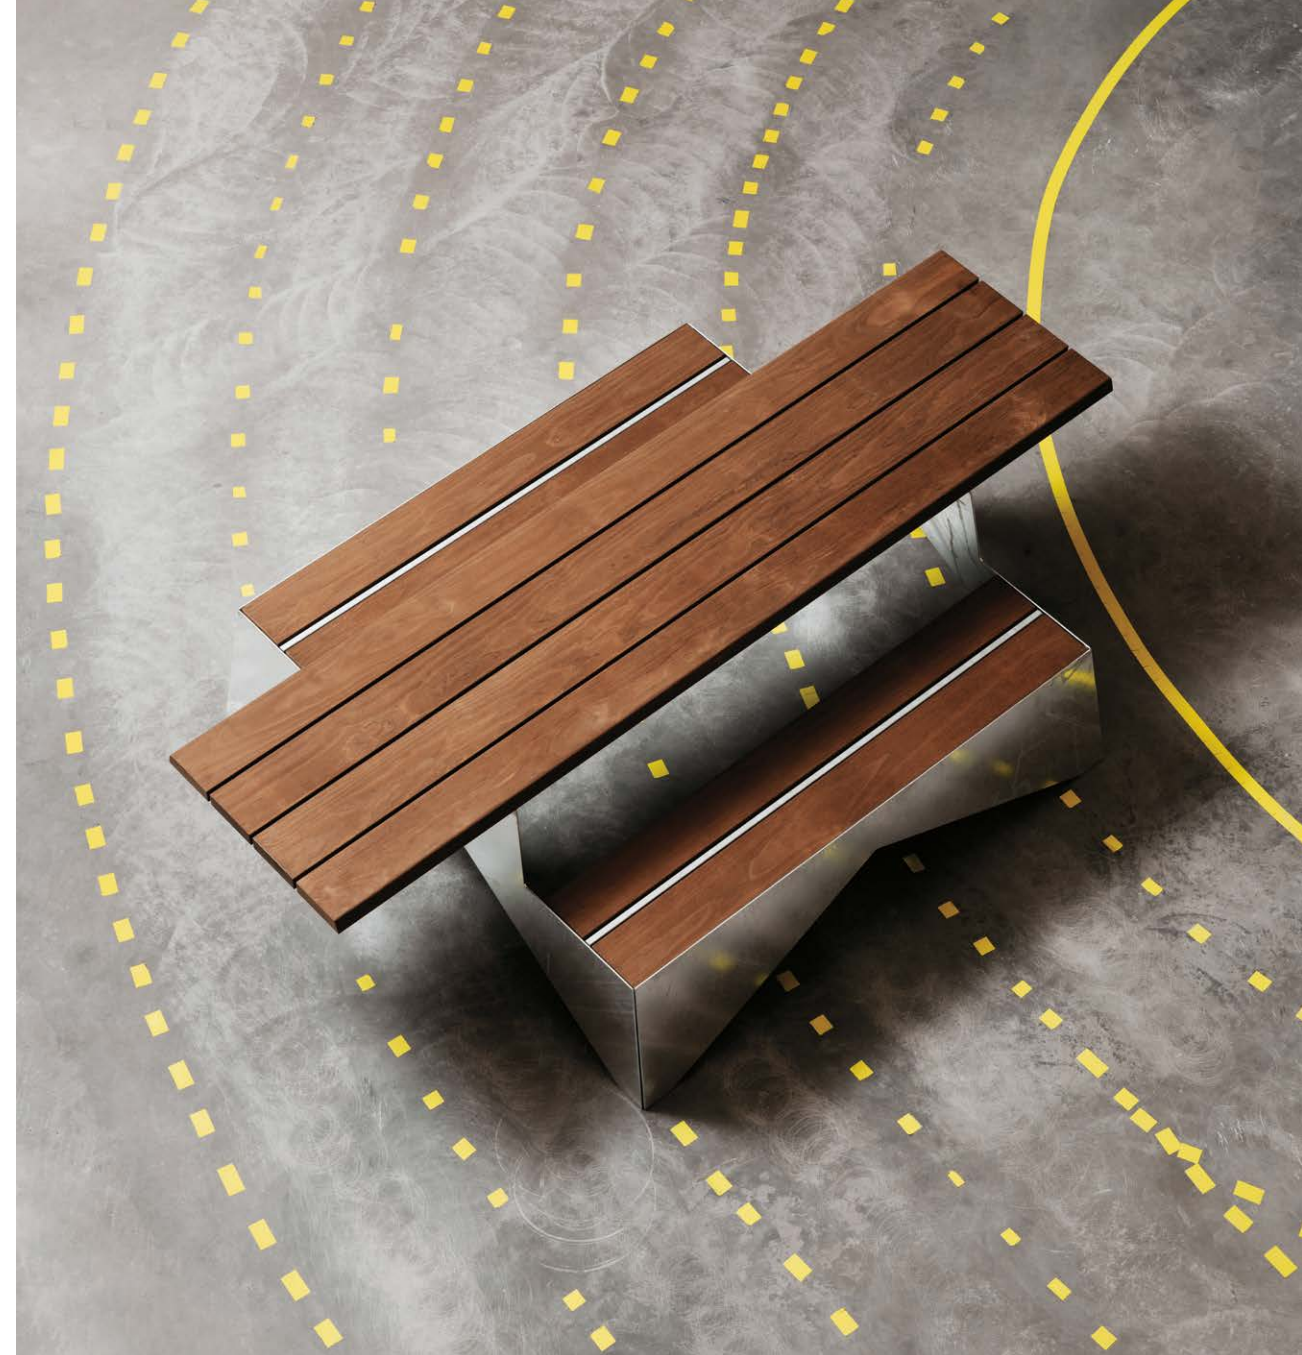

At three metres, the Briskeby bench is the longest single bench in our collection. It works brilliantly as a generous and social meeting place with room for many. The bench has a timeless Scandinavian aesthetic with expansive steel and wooden surfaces and is elegant and comfortable. It comes in linseed oil-treated Nordic pine as standard. It also comes in painted Accoya.

Name: Briskeby bench  
Designed by:  
Andreas Engesvik  
RAL: 6011,  
painted Accoya

Name: Briskeby bench  
Designed by: Andreas Engesvik  
Hot dip galvanised steel, linseed oil-treated pine

Name: Stoop picnic bench  
Designed by: Julien De Smedt  
Hot dip galvanised steel, Kebony

The Stoop picnic bench is an expansion of the Stoop family and builds further on the idea of using steps as seating in public places. The Stoop picnic bench works as a social and informal meeting place for people of all ages.

Name: Urban sun bench  
Designed by: Arthur Wozniak  
& Hallvard Jacobsen  
Hot dip galvanised steel,  
linseed oil-treated pine

The Urban sun bench is perfect for longer meetings with its high comfort level, ergonomics and generous seating surface. The sun bench is an expansion of the popular and versatile Urban series.

Name: Stoop Mini bench  
Designed by:  
Julien De Smedt  
RAL: 1005, oiled oak

The Stoop Mini bench is a smaller version of the popular Stoop bench. It works as a social and playful meeting place and is based on the universal idea of using steps as seating. Its shape enables several benches to form an urban auditorium where each bench has space for up to five people.

# Vestre Habitats

Urban parks and green spaces represent important natural ecosystems, and Vestre is investigating how we can achieve greater biodiversity in urban areas through smart furniture design and vegetation. That's why we've created Vestre Habitats. A million species of animals, plants and fungi are now threatened with extinction. Biodiversity is important for all life on earth because it contributes to stable ecosystems. Natural diversity can be preserved through more knowledge and protection. We want to work to increase knowledge and awareness as well as reverse this negative trend with our contribution: functional and thoughtfully designed furniture which protects natural processes such as decomposition. An apparently lifeless log can hide a teeming universe of microscopic species and habitats.

Name: Wings bird house  
Designed by: Arde  
RAL: 6002

The Wings bird house is part of the Vestre Habitats series, where the products are designed to protect and increase biodiversity in cities. The lack of safe nesting spaces means that new flocks of birds are often unable to establish themselves. This problem could be overcome by putting up more nest boxes. The Wings bird house is one such solution and comes in several variations.

Name: Log bench  
Designed by: Arde  
RAL: 1012

The Log bench makes it possible to frame and arrange logs and branches in an organised stack so that you can sit on the bench and watch the slow decomposition process. Fallen trees are vital for conserving biodiversity, as they are home to many rare species of insects, fungi, lichen, mosses and plants. Many birds and bats need hollow trees to nest and reproduce in, and birds also need resting places.

Name: Decay Edge  
planter, Leaf insect hotel,  
Wings bird house  
Designed by: Arde &  
Rethink Studio  
RAL: 1005

Decay Edge is a combination of a compost bin and a planter. It makes it possible to create living microhabitats by combining elements such as stone, wood, organic materials, soil, plants and water. This is how you create an environment where small creatures can live, hide and find food. The modular system is available in a number of different sizes and shapes so that it's easy to adapt to various surroundings.

Leaf is an insect hotel that gives insects a home in urban neighbourhoods. The shape of the product is based on a stylised leaf. The design is minimalistic and also has a sculpture-like character which can easily be placed either alone or in groups. Leaf can be placed in planters, flower beds, on roof terraces or in parks—you can let your imagination run wild. The most important thing to remember is to ensure that biological, species-typical parameters are considered in order to enrich the opportunities for insects to survive in urban environments.

Name: House bench  
Designed by: Arde  
RAL: 5013

The House bench makes it possible to frame and arrange logs and branches in an organised stack so that you can sit on the bench and watch the slow decomposition process. Old trees are vital for conserving biodiversity, as they are home to many rare species of insects, fungi, lichen, mosses and plants. Many birds and bats need hollow trees to nest and reproduce in, and birds also need resting places.

Name: Pile bench  
Designed by: Arde  
RAL: 4007

With the Pile bench, excess materials such as large stones and gravel can easily be arranged into small piles. These piles create variations in light, temperature and humidity. They also store heat from the sun, which is handy for heat-loving insects and reptiles.

# About Vestre

## We manufacture in Scandinavia

All our products are designed and manufactured in Scandinavia using renewable energy, local materials and environmentally friendly production technology. Norway, Sweden and Denmark have a combined population of 21 million. We can't all be the best at everything. That's why we collaborate with the best people in each individual production area. And that's why our products have a little piece of Scandinavia within them. Vestre has two factories, one in Sweden and one in Norway. Our steel factory in Torsby, Sweden opened in 2013 and was designed by the Norwegian architecture firm Snøhetta. The second, the world's most environmentally friendly furniture factory, is in Magnor in Norway and was designed by the Danish architecture firm BIG Bjarke Ingels Group. All the products that are produced here are quality and environmentally certified in accordance with ISO 9001 and ISO 14001, and we continuously work on innovation and improvements driven by our employees.

The DOGA Award for Design and Architecture is Norway's most important recognition of companies and practitioners who excel through outstanding use of design and/or architecture.

The German Design Awards are the international awards from the German Design Council and are among the most well-known design awards worldwide.

The Nordic Swan Ecolabel is the official environmental label for Nordic countries working to reduce the environmental impact of the production and consumption of goods—and to make it easier for consumers and professional buyers to choose the most environmentally friendly goods and services.

## VestreQualityProgramme™

### **We offer a lifetime guarantee against rust**

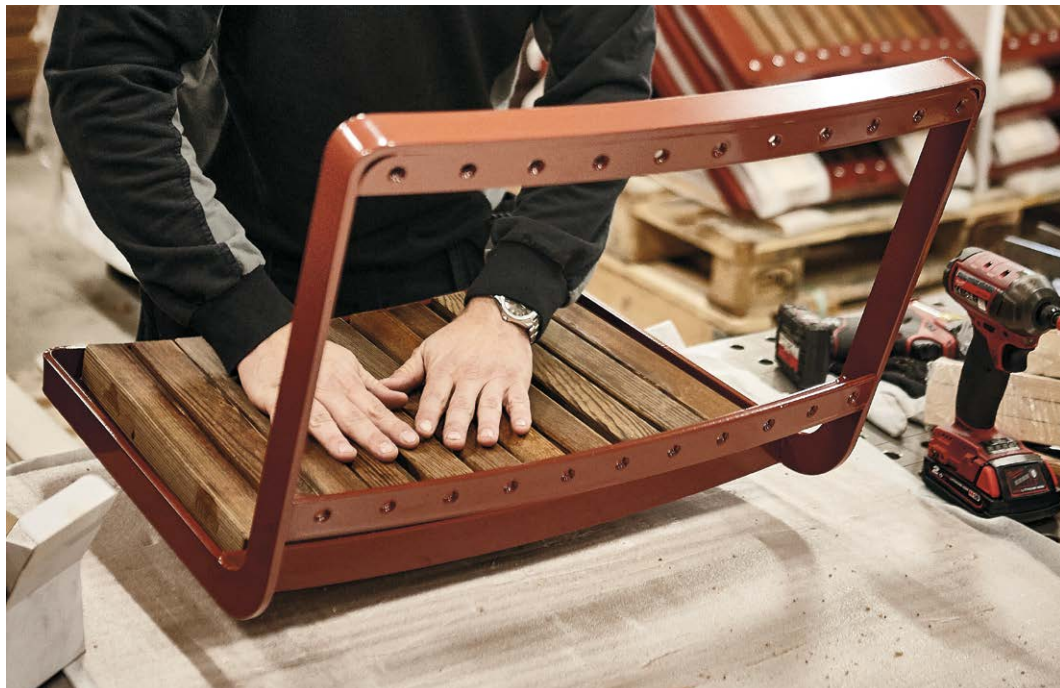

At Vestre, we use hot dip galvanised steel and aluminium that doesn't rust. All our products therefore come with a lifetime guarantee against harmful rust. The guarantee covers normal use. Please be aware that some discolouration may occur after many years of use in exposed environments.

### **We offer a 15-year guarantee on powder coating and wood**

Vestre offers a 15-year adhesion guarantee on powder-coated surfaces as long as they are not exposed to mechanical damage, impact, corrosive chemicals or similar. We also offer a 15-year guarantee against rot damage on standard linseed oil-impregnated pine and a 30-year guarantee on Kebony. The guarantee requires the wood to have been kept clear of dirt and vegetation, and for high-pressure washing or chemicals that can damage the surfaces and wash away the protective oil not to have been used. Wood is a living material, and it is natural for small cracks to appear over time.

### **The parts never go out of date**

What if misfortune strikes? If the product is exposed to vandalism or there is a need for extended maintenance, we can help. Vestre supplies all spare parts throughout the product's lifetime. And if we don't have the parts in stock, we'll make them for you.

## Everything lives longer with a bit of love

Furniture from Vestre requires minimal maintenance, but we recommend that you inspect it every once in a while, so that any damage can be fixed. After all, everything lasts longer with a little TLC. Screws and bolts should be checked and retightened after a few weeks. Steel parts should be cleaned regularly and as needed, but please be aware that strong chemicals can affect the surface. Standard linseed oil-impregnated pine has a natural colour which will turn grey over time. The wood will have a longer lifespan if the wooden details are oiled every three to five years. How often depends on wear and tear and climate.

## Nordic steel and aluminium have lower emissions

Vestre uses high-quality Nordic steel and aluminium with the lowest possible carbon footprint. The worldwide steel industry accounts for approximately 7% of global greenhouse gas emissions. In Scandinavia, we produce steel with up to 30% lower than average emissions. The same applies to aluminium—energy consumption here is significantly lower and greenhouse gas emissions are up to 8 times lower than the average. Most of the aluminium we use has a recycled content of 75%. This is possible thanks to new technology and the large share of renewable energy. Our products are sturdily dimensioned to withstand harsh use. We cut the metal with high-tech laser machines, which ensures high precision and minimal waste of resources. We also weld both manually and with welding robots. Finally, the remaining metal is sent back to the plant and recycled.

## Lifetime guarantee against rust

All steel components from Vestre are hot-dip galvanised in a zinc bath at a temperature of around 450°C. The bath is heated using 100% renewable energy. The process forms a corrosion-protective alloy (80–120 µ) which means the product can remain outdoors for several decades. Approximately 2–4 µ of the alloy disappears in the first year, and after that 1–2 µ per year as a result of weather and wind. Hot dip galvanisation was patented by French engineer Sorel in 1837. The process takes place in accordance with ISO 1461 and strict environmental regulations. Zinc (Zn) is an important building block which occurs naturally in stone, water and humans. At Vestre, we use zinc produced in Odda in Norway. Hot-dip galvanised steel will 'heal' itself if the surface is damaged - the zinc contracts and forms a new alloy over the damaged area. This is called cathodic protection. If the steel is powder-coated after hot-dipping (Duplex system), it will have an even longer lifetime since the powder coat protects the zinc alloy.

## Powder coating developed for the North Sea

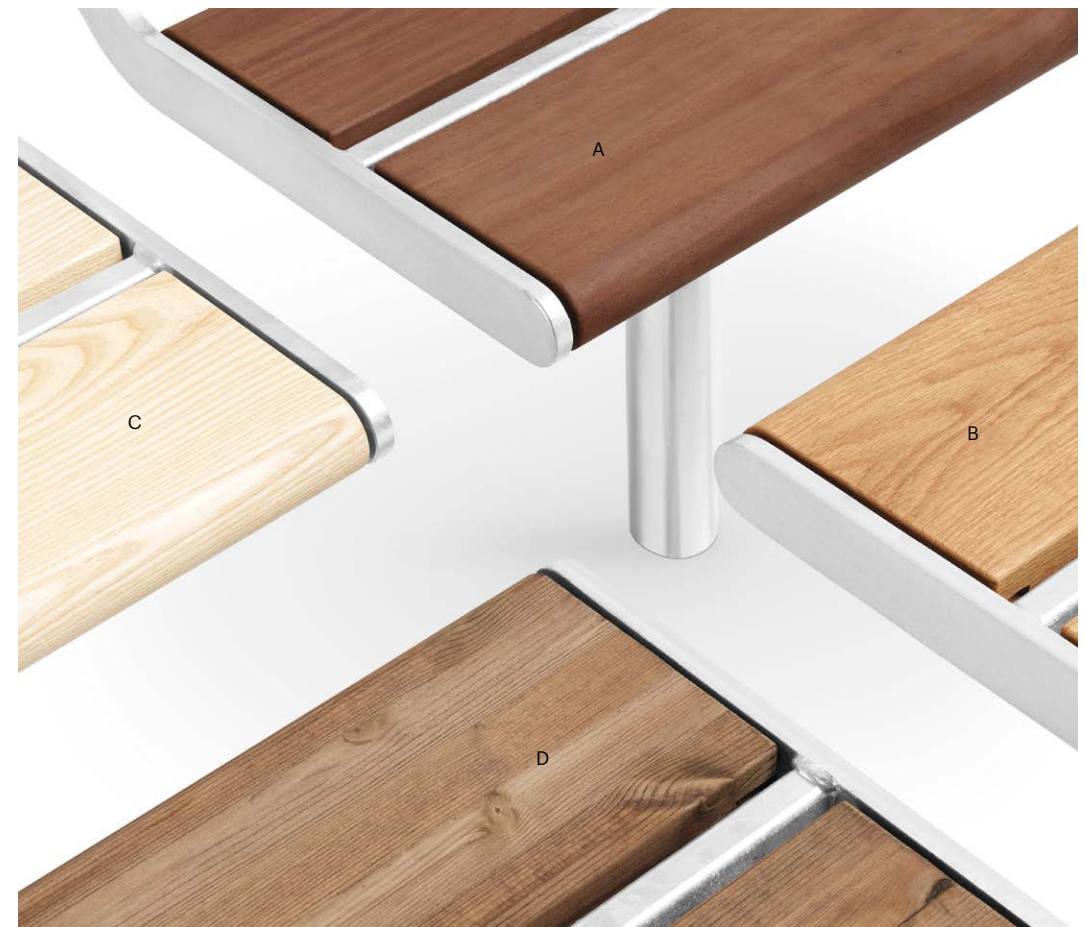

Before powder coating, we thoroughly treat the metal in a multi-step process. This is done through pre-treatment with sprays which consist of degreasing, pickling, purified water and activators. The powder itself is completely free of solvents. We apply the electrostatically charged powder coating using sophisticated robots. Finally, the powder is melted in a curing oven that gives the product its final appearance. This process was developed in Norway to provide a high-quality finish to comply with the strict standards in corrosion class C5-M (ISO 12944). Vestre offers around 200 RAL Classic colours at no additional cost.

Corrosion Class (EN ISO 12944)	Examples
C1	Heated buildings
C2	Outdoors in inland areas or in warehouses where condensation may occur
C3	Outdoors in coastal climates with little salt content or indoors in production facilities with high humidity levels
C4	Outdoors in coastal climates with moderate salt content or in indoor swimming pools
C5-I	Outdoors in coastal climates with high salt content
<b>C5-M/CX</b>	<b>Outdoors in coastal climates with high salt content, high humidity levels, and aggressive atmospheric corrosion</b>

## We use only sustainable wood

For our furniture, we use high-quality FSC® certified pine from Norway and Sweden as standard (*Pinus sylvestris*). Scandinavia has one of the world's most sustainable forestry sectors. The cold Nordic climate makes the trees grow slowly and they are not felled until they are 80–120 years old. This means that Scandinavian pine is harder and better suited for use in outdoor furniture than pine from warmer regions, which normally grow 3–5 times faster. The wood we use is impregnated with linseed oil which protects against rot. After some time outdoors, the surface develops a natural grey patina. At Vestre, we don't offer wood from rainforests. We use the more environmentally friendly option of Kebony. The technology behind Kebony® is an environmentally friendly and patented wood treatment process, developed in Norway. This process improves the wood's properties using biobased liquid. The wood's cellular structure is permanently altered and acquires a very special quality – as well as a deep brown colour that we also find in tropical tree species. When the furniture has been outside for a period of time, the surface acquires a natural silver-grey patina. We use FSC® certified pine (*Pinus radiata*) from New Zealand for Kebony treatment. After this treatment, Kebony is even harder and more durable than teak and mahogany. For indoor use, we always recommend oak or ash, which we also offer. In addition, we supply offer products containing fire-retardant wood where required.

Colour	Type of wood	Durability EN 350 (1 = very durable, 5 = not durable)	Hardness EN 1534 (Brinell N/mm <sup>2</sup> )
<b>A</b>	Kebony ( <i>Pinus radiata</i> )	1	41
<b>B</b>	Oiled oak ( <i>Quercus</i> )	2	33
<b>C</b>	Oiled ash ( <i>Fraxinus</i> )	2	30
<b>D</b>	Linseed oil proofed Nordic pine ( <i>Pinus sylvestris</i> )	1	19

A: Kebony, B: oiled oak, C: oiled ash and D: linseed oil-treated Nordic pine

## The Plus

In 2022, Vestre began production at the world's most environmentally-friendly furniture factory, The Plus in Magnor, in the county of Innlandet. The factory is the largest investment in the Norwegian furniture industry for decades and will be a global showcase for sustainability and highly efficient manufacturing. Spectacular architecture, a visitor centre and a 30-hectare (74 acre) adventure park will also help to develop Magnor as an attractive destination for visitors from all over the world. In this way, Vestre will inspire others to take part in the green transition.

"The Plus has a simple x-shaped geometry, whose four wings deftly distribute the building's bulk and constantly reinforce the sense of being immersed in the forest. At the centre of the plus sign, the four wings form an effective logistics hub, which is also a democratic meeting place for employees and visitors that provides maximum transparency."

**Bjarke Ingels,**  
Founding Partner,  
**Viktoria Millentrup,**  
Design Lead Architect, **BIG**

"The Plus is conceived as a village, guided by principles of sustainable architecture and high-efficiency production."

Wallpaper

"The Plus is the greenest, most transparent furniture factory in the world – and you are invited to experience it. Vestre and BIG have reimagined the factory as a hub for jobs, tourism and social gatherings."

Fast Company

**The Plus** has been designed by Bjarke Ingels Group (BIG) in Copenhagen, Denmark. Together, we have created an entirely new typology, where people, production, technology, architecture and nature are completely integrated with each other.

The Plus is the first furniture factory in the world and the first industrial project in Scandinavia to achieve BREEAM Outstanding certification. This is the highest level of environmental certification, and the factory is 'Paris Proof': compared to an equivalent conventional factory, we will reduce greenhouse gas emissions by over 55% and supplied energy needs by over 90%. This is possible through Industry 4.0 technology such as powder coating robots with object recognition, intelligent scanners and big data.

Our goal has not just been to build the world's most environmentally-friendly furniture factory, but also the world's most open

and transparent factory. The Plus is open to anyone who wants to visit the factory, and The Forest Camp park area surrounding the factory building features activities and nature trails that guide visitors to the green roof. In this way, we hope to create increased interest in the industry, technology and sustainable production. Visitors will also have access to the Vestre Energy Center and the Vestre Clean Water Center, where they can learn about energy production, energy recovery, water treatment and the lifecycles of the materials we use. At The Plus, there won't be any fences, boundaries or secrecy – an homage to allemannsretten, or the freedom to roam. We believe that it is through sharing that we can drive the world forward.

*You can read more about the factory, the visitor centre and The Forest Camp at [theplus.no](http://theplus.no).*

# Price list and technical information

Every place is unique, so Vestre products can be adapted to suit different surroundings. The scope of our collection – combined with hundreds of different colours and materials – offers enormous flexibility and virtually unlimited choice. We endeavour to accommodate requests for special requirements wherever possible.

All prices are quoted net without VAT and shipping, and apply to standard designs. Furniture comes with linseed oil impregnated pine as standard, unless otherwise stated. Prices and availability are subject to change without notice.

At [vestre.com](http://vestre.com) you will find high-resolution images, installation instructions, illustrations, 3D / BIM models and a 3D configurator for all products.

The product lists use the following system:

**XXX-901:** The product is hot-dip galvanised, which produces a grey finish with permanent rust protection.

**XXX-900:** The product is hot-dip galvanised and then powder-coated in a RAL colour of the customer's choice.

**XXX-902:** The product is made from stainless or acid-resistant steel, giving it an elegant metallic finish.

**XXX-904:** The product is made from aluminium and then powder-coated in a RAL colour of the customer's choice.

**XXX-XXX A:** Anchored by a base plate, which is bolted down.

**XXX-XXX B:** Anchored by means of wall mounting.

**XXX-XXX C:** Anchored by means of concreting in (some products have an optional pre-cast concrete base, which carries an extra charge).

**XXX-XXX D:** Demountable, i.e. the product can be removed temporarily, for instance when clearing snow or for vehicle access.

**XXX-XXX MK:** The product comes without legs, for mounting directly on top of a wall.

**XXX-XXX P:** Seat, back and/or table top in perforated steel.

**XXX-XXX S:** The product swivels (for instance a chair or barstool).

**XXX-XXX K:** Connection module.

**Kg CO2:** The product's carbon footprint is provided in kilogrammes (A1-A3, from raw material to finished product).

**MJ:** The total energy used in production of the product A1-A3.

\* indicates that we have used the environmental values from a similar product.

© Vestre 2022

In this year's inspiration book, Vestre encourages people to find their way back – to each other and to nature – so that we can ensure that our planet continues to be habitable for future generations. One way is to create sociable meeting places where people can come together and create a common 'we'. Another way is to be uncompromising when it comes to the way we do business. Between the covers of this book, you will get to read more about just that. You will also find practical information about our furniture, such as the purpose, price list and carbon footprint for each individual product. This makes it easier to compare your different options.
