

HABITATS Decay Edge

5874

Designed by
René Hougaard, ARDE

Habitats decay edge is a combination of a compost bin and a planter. It makes it possible to create living microhabitats by combining elements such as stone, wood, organic materials, soil, plants and water. This is how you create an environment where small creatures can live, hide and find food. The system is available in a number of different sizes and shapes so that it's easy to adapt to various surroundings.

Anchoring/assembly

Primary material

Hot-dip galvanised steel

All steel components are hot-dip galvanised, which produces a matt grey surface after a while. We offer a lifetime anti-rust warranty.
